

## To Animate a Series of Photos – Make a slide show

One of the coolest techniques for creating an attention-getting animation is to use a series of still photos of a sequence, or to use a series of related or unrelated photos. If you are using a series of photos of a sequence make sure that you name them so they will be in the order you wish them to be.

### STEPS:

- 1) Choose Window from the menu and choose Show Optimize.
- 2) Choose Window from the menu and choose Show Layers.
- 3) Choose Window from the menu and choose Show Animation.

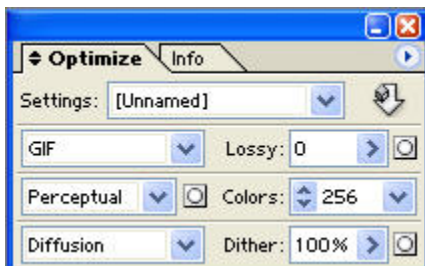

- 4) Choose File from the menu and choose Import Folder as Frames
- 5) Navigate to the target folder

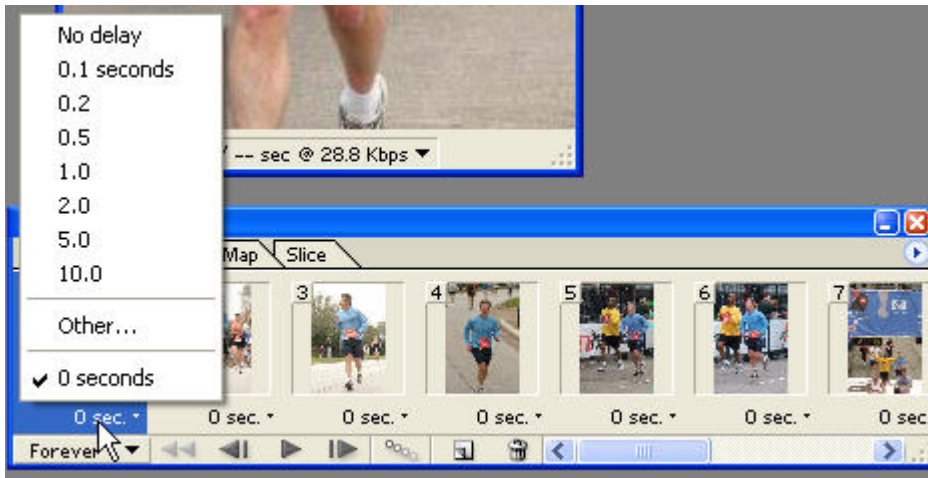

6) The Photos will appear as frames and as layers

7) Choose GIF, Perceptual, and Diffusion from the Optimize palette

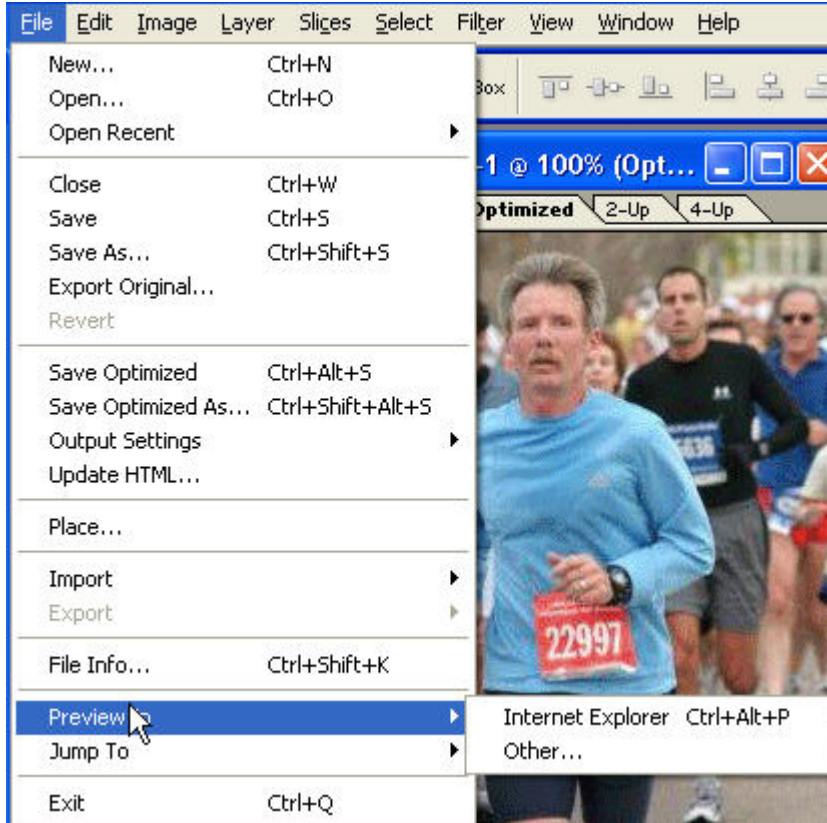

- 8) Click on the 0 Sec in Frame one in the Animation Palette and select the number of seconds to pause before the next photo shows. (In our example lets choose 5 seconds for each of the photos.) Repeat the process for all the photos. Each one can be a different time. You can change the sequence of the frames by dragging , if needed.

- 9) Choose Optimize from the Viewing Window.

**10) Choose File and Preview In – to preview in your choice of browsers.**

**After you have viewed your great work, close the browser and now back in Photo Shop - Choose File and Save Optimized As – Choose the location that you desire to save your file in – give it a name and click Save and that's it. Now you can copy your file to a CD or other media and your done.**
